

01:Prepare a refined backlog

Epic	User Story
Customer Account	As a customer, I want to create an account so that I be able to place orders and save my data like my address, name, favorite restaurants, credit cards.
	As a Product Owner, I want customers to create accounts so that I can collect more data about my clients to help them and know more information would help me to develop my services
Restaurants	As a customer, I want to be able to view restaurants so that I can review ratings, delivery speed, offers, and menu
Search	As a customer, So that I can quickly find my favorite restaurants
Restaurant Menu	As a customer I want to review restaurant menus to know easily (price, picture)
Cart	As a customer I want to choose different items and see the full price of my order
Purchase	As a customer I want to have different purchasing ways .
Restaurant Orders	As a restaurant admin, I want to have a UI for viewing received orders sequentially with notification and orders number to be able to accept and notify the user that his order is accepted and being prepared
	As a user, I want to be able to view order status so that I can track my order status (pending, confirmed, being prepared, out for delivery, delivered).
Rating	As a user, I want to be able to rate my order so that I can leave a rating per ordered item and a overall review of my experience for delivery speed, delivery driver, food quality, special instructions.
	As a restaurant admin, I want to be able to rate delivery drivers, so that the least rated can be filtered out of service.
Voucher system	As an app admin, I want to be able to issue and cancel voucher codes, so that I can provide discounts and compensations to engage more users.
Competitive suggestion	As a user, I want to be able to browse the menu items within a locked/reserved slot so that to avoid being faced with a restaurant BUSY alert when I finally click on submit my order / finalize which is a recurring annoying issue with Talabat.
